

# **Joint Operations-INTEL Information System (JOIIS) and Common Operational Picture (COP)**

---

## **SYSTEM DESCRIPTION**

Joint Operations/Intelligence Information System (JOIIS) and Common Operational Picture (COP) is a one-way interface that allows the receipt of air bases, facilities, targets, and units from the North Atlantic Treaty Organization (NATO) JOIIS into the COP as Joint Unit (JUNIT) Track Database Management System (TDBM) tracks. Defense Information Systems Agency (DISA) and the NATO Consultation, Command and Control Agency (NC3A) cooperatively developed JOIIS to enable the injection of the NATO ground picture into the NATO COP. A macro within the JOIIS Microsoft (MS) Access database writes data files with ground unit and target data either to a local directory for manual copy to floppy and physical transfer, or via file transfer protocol (FTP) directly to the COP workstation. The 'interface' then is simply a floppy disk or the use of standard FTP.

## **INTEROPERABILITY CERTIFICATION STATUS**

Please refer to the [Joint GCCS Interoperability Status Table](#)
